Chan, Christina

Subject:

Rush search request for 09/762577

Please search in commercial database, issued patent files, pGPUB and interference:

1) Oligomer search for SEQ ID NO:11

2) Oligomer search for the nucleic acid encoding SEQ ID NO:12.

Thank you.

MINH TAM DAVIS

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to an antisense oligonucleotide targeted to a nucleic acid encoding Livin and that specifically hybridises with the nucleic acid encoding Livin and inhibits expression of Livin. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis. The presensequence represents human livin DNA.

The present

New antisense oligonucleotide, having a sequence targeted to a nucleic acid encoding Livin, useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis.

The invention relates to a method of screening for nucleic acid molecules CC that show altered expression in a first cell sample comprising comparing CC that show altered expression in a first cell sample comprising comparing CC the gene expression profile of the sample with that of a second reference sample, where the first sample has been grown in the presence of butyrate CC or a related carbon source from which butyrate is directly or indirectly can entered, but the reference sample has not. The invention also relates to the initiation and/or progression of colorectal cancer in an animal, CC comprising providing a biological sample comprising at least one cell to be tested, contacting the sample with a ligand (preferably a hybridizing CC comprising the presence of at least one molecule in the sample, a method contacting the presence of at least one molecule in the sample, a method confidered that least one polypoptide associated with the initiation cC and/or progression of colorectal cancer in an animal comprising providing the sample comprising at least one cell to be tested, contacting the sample comprising at least one cell to be tested, contacting the sample comprising at least one cell to be tested, contacting the sample comprising at least one cell to be tested, contacting the sample with at least one one ligand that specifically binds at least one cell to be tested, contacting contacting the sample which varies by the addition, deletion or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 2

CC substitution of at least one amino acid residue and detecting the CC presence of the polypeptide in the sample, a method of screening for CC agents that modulate the activity of at least one polypeptide encoded by CC a gene associated with the initiation and/or progression of colorectal CC cancer comprising forming a preparation comprising at least one addition, delection or substitution and at least one agent to CC be tested and determining the activity of the agent with respect to CC activity of the polypeptide, and an antibody or its effective binding portion identified by the method, for use as a pharmaceutical. The methods are useful for screening for nucleic acid molecules that show CC altered expression in a cell sample, and for detecting a nucleic acid and CC apolypeptide respectively, that are associated with the initiation CC monitoring colorectal cancer, especially adenocarcinoma. The methods are calls useful for screening for agents that modulate the activity of at CC also useful for calcrening for agents that modulate the activity of at CC least one polypeptide encoded by a gene associated with the initiation cand/or progression of cancer, where agents identified by the methods are consulted for treating colorectal cancer. The methods could also be used to detect or monitor other conditions such as colitis, Crohn's disease or irritable bowel syndrome, as ascreening tool for fiber consumption, as call cancerous growth. This sequence represents a human nucleic acid colemntified by the screening method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

CC The present invention describes an isolated nucleic acid molecule, which CC comprises the sequence of any of the genes that are up-regulated or down-CC regulated in specific cancers (e.g., about 1031 genes up-regulated in CC acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer CC ABR85879. ABR58799. Also described: (1) determining the presence or CC ABR85871 to ABR58799. Also described: (1) determining the presence or CC comprising a nucleic acid molecule described above; (3) a host cell CC comprising the vector; (4) an isolated polypeptide, which is encoded by CC (4); (6) specifically targeting a compound to a pathological cell in a CC drug screening assay. The nucleic acid is useful as diagnostic markers or CC diagnosting a pathology, e.g. cancer (e.g. cancer of the bone marrow, CC diagnosting a pathology, e.g. cancer (e.g. cancer of the bone marrow, CC drug screening, breast, cervix, colon/rectum, kidney, lung, ovary, CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, CC atherosclerosis and endometriosis. The nucleic acid is also useful in CC drug screening, particularly for identifying agents for treating these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 1228;

The invention is useful for treating cancer such as lung cancer, colorectal cancer and melanoma. The present sequence is the human livin beta splice variant DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1268 BP; 204 A; 402 C; 422 G; 240 T; 0 U; 0 Other;

Livin is an inhibitor of apoptosis protein 3 (IAP-3). Livin is present in certain cancer cell lines and prevents apoptosis. The livin polypeptide is useful for identifying compounds that inhibit and modulate livin dysfunction and activity. Such compounds are useful in the treatment of a dysfunctional apoptosis condition. Livin polypeptides are useful as a source of probes and primers, and in gene therapy. Livin polypeptides and polynucleotides, their inhibitors and modulators are useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1376 BP; 233 A; 432 C; 454 G; 257 T; 0 U; 0 Other;

Livin is an inhibitor of apoptosis protein 3 (IAP-3). Livin is present in certain cancer cell lines and prevents apoptosis. The livin polypeptide is useful for identifying compounds that inhibit and modulate livin function and activity. Such compounds are useful in the treatment of a dysfunctional apoptosis condition. Livin polypeptides are useful as a source of probes and primers, and in gene therapy. Livin polypeptides and polynuclectides, their inhibitors and modulators are useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel livin polypeptides and pathophysiological disorders melanoma cancer, Alzheimer's
